PROFESSIONAL SUMMARY

Data Analyst with hands-on internship experience turning field research and raw IoT sensor data into stakeholder-ready Power BI dashboards, plus academic and self-directed projects spanning SQL/BI development and dashboard design. Proficient in Python, R, SQL, Power BI, and Tableau. Comfortable working end-to-end — from requirements gathering and data cleaning to client-facing analysis. Completed all coursework and final year project in August 2026 and seeking a full-time Data Analyst / BI Analyst role where I can apply data modelling and dashboard development to real business problems.

EXPERIENCE

Data Analyst Intern

Jul 2025 – Oct 2025

Miota & Mindrobotics Sdn. Bhd.

- Conducted a site visit and stakeholder interviews at a precision-farming IoT pilot in Johor; mapped field-to-cloud data flow in a Data Flow Diagram and identified workflow gaps (manual reporting delays, inconsistent sensor logs).
- Contributed to a System Requirement Document and helped define project KPIs, presenting findings directly to the company's CMO to align technical design with client objectives.
- Performed exploratory data analysis on live IoT energy-monitoring data (voltage, current, load, frequency, power factor) from a Bank Indonesia facility, cleaning and structuring the dataset for dashboard readiness.
- Built and iterated a Power BI dashboard — using Power Query for data modeling — visualizing energy consumption, load distribution, and power-factor stability; presented the finished dashboard to the CMO for client sign-off.

EDUCATION

Bachelor of Computer Science — Data Analytics

Asia Pacific University of Technology and Innovation, Malaysia • Completed: Aug 2026 • Convocation: Mar 2027

High School Diploma (Science)

Loyola College, Semarang, Indonesia • 2020 – 2023

PROJECTS

Final Year Project: Apple Retail Sales Forecasting Pipeline

Academic — Final Year Project, Data Analytics degree

- Built an end-to-end sales forecasting pipeline in Python (CRISP-DM methodology), engineering 29 features including public-holiday effects across 19 countries, seasonal encoding, and Apple product-launch proximity scoring.
- Tuned Random Forest and XGBoost models (Optuna, seeded for reproducibility) to R^2 of 0.74–0.75 and ~67% forecast accuracy, validated with SHAP analysis; delivered a 3-page Power BI dashboard and formal academic report.

London Housing Data Analysis

Personal project — public dataset (Kaggle)

- Cleaned and modelled a London-area housing dataset of 3,480 property listings using SQL and Excel (resolving 962 missing location values, ~28%), then built Power BI dashboards surfacing price trends and property-type breakdowns across 57 city/county regions spanning London and neighbouring counties.

Business Intelligence System for Velocity Cycles

University coursework — Year 2 BI module

- Designed an end-to-end BI solution (SQL Server, SSAS, MDX) using the CRISP-DM methodology, building a star-schema OLAP cube across 6 dimensions and deploying it to Power BI with 8 interactive visuals and a KPI (Order Quantity vs. 55,000-unit target) for sales data spanning the US, Canada, Australia, and the UK.

Marketing Campaign Performance Dashboard

Personal project — public dataset

- Built a Power BI dashboard analyzing 200,000 marketing campaign records across 6 channels, 5 audience segments, and 5 U.S. locations, using DAX and Power Query to enable dynamic drill-down by channel, audience, month, and location.

CERTIFICATIONS

- Python for Data Analysis — Great Learning (Feb 2025)
- Data Analytics with Python Workshop (Mar 2025)

SKILLS

Programming: Python, R, SQL, C, C++, Java

Libraries: Pandas, NumPy, Scikit-learn, ggplot2, Jupyter Notebook

BI & Visualisation: Power BI (DAX, Power Query), Tableau, Excel, SSAS, MDX, SQL Server

Data Skills: Data Cleaning, Requirements Gathering, Process Mapping (DFD), Predictive Modelling, Statistical Analysis

Languages: English (Bilingual), Indonesian (Native)
